Response to Arguments

Applicant has argued that the recapture doctrine is meant to prevent broadening and has argued that applicant has added limitations rather than broadening. This argument is respectfully found not to be persuasive for the following reasons. The limitations which were omitted were necessary in the original application in order to render the claims allowable (please see MPEP 1412.02). For example, in added claim 39, the recitation relating to the sidewalls and the recitation relating to the conductive film on a portion of the sidewalls are not additional limitations which relate to the patentability in that claim 3 of the patent includes the limitation of a battery supported by the substrate and the limitation of the conductor on the sidewall is included in claim 3 by the limitation that part of the antenna is within the recess and part of the antenna is outside the recess, which requires that the conductor extends over at least a part of the sidewall. In addition, the added limitation of a flexible substrate is new matter, in that the original application does not have the support for the limitation of a flexible substrate. Claim 63 also contains the new matter limitation of a flexible plastic substrate. In addition, claim 63 does not recite the limitations that were necessary in order to render the limitations in the original application allowable. These limitations included recitation of loop antenna with portions which cross at a bypass comprising a dielectric material and the limitation of a battery in addition to the limitation of the antenna in part in the recess and in part outside of the recess (amendment of 10-26-99). The same arguments can be made for the other independent claims 84, 92, and 97.

Claim Rejections - 35 USC § 112

Art Unit: 2891

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 39-43, 63-67, and 73-101 are rejected under 35 U.S.C. 251 as being based upon new matter added to the patent for which reissue is sought. The added material which is not supported by the prior patent is as follows:

The recitation "flexible plastic substrate" is new matter, as the application as originally filed does not support this recitation.

Claims 63-66 and 97-101 are rejected under 35 U.S.C. 251 as being an improper recapture of broadened claimed subject matter surrendered in the application for the patent upon which the present reissue is based. See *Pannu v. Storz Instruments Inc.*, 258 F.3d 1366, 59 USPQ2d 1597 (Fed. Cir. 2001); *Hester Industries, Inc. v. Stein, Inc.*, 142 F.3d 1472, 46 USPQ2d 1641 (Fed. Cir. 1998); *In re Clement*, 131 F.3d 1464, 45 USPQ2d 1161 (Fed. Cir. 1997); *Ball Corp. v. United States*, 729 F.2d 1429, 1436, 221 USPQ 289, 295 (Fed. Cir. 1984). A broadening aspect is present in the reissue which was not present in the application for patent. The record of the application for the patent shows that the broadening aspect (in the reissue) relates to claim subject matter that applicant previously surrendered during the prosecution of the application. Accordingly, the narrow scope of the claims in the patent was not an error within the meaning of 35 U.S.C. 251, and the broader scope of claim subject matter surrendered

Art Unit: 2891

in the application for the patent cannot be recaptured by the filing of the present reissue application.
